Summary

Founding Engineer with a proven track record of driving 0→1 product lifecycles, independently architecting and deploying production-grade, full-stack systems (Next.js, Rode.js, PostgreSQL). Leverages a rigorous foundation in Data Structures & Algorithms and System Design to deliver scalable solutions, with extensive experience developing AI-integrated products (RAG pipelines, LLM tooling) and complex, real-time architectures (geospatial matching, event-driven notifications).

Experience

Skolist Dec 2025 – May 2026 *Founding Engineer Remote*

Served as sole engineer on an AI-powered EdTech startup, owning architecture, sprint planning, and deployment 0→1; shipped a full-stack platform (Next.js, Rode.js, PostgreSQL) that onboarded **[500] active student users** within the first release cycle. Designed an adaptive assessment engine with normalized schemas and REST APIs, cutting average content-authoring time by **[30%]** through reusable question templates.
Built a personalized analytics and recommendation engine that flagged individual learning gaps, driving a **[20%]** increase in practice-set completion by surfacing targeted content.
Applied caching, query optimization, and modular service boundaries to the assessment engine, cutting p95 API response time by **[40%]** as concurrent usage scaled.

Projects

HandToHand | *Next.js, Rode.js, PostgreSQL, Redis, Prisma, Socket.IO* Live Demo

Architected a decentralized P2P campus logistics platform for IIT Delhi, onboarding **[300] students** for errands, item lending, and smart campus logistics.
Engineered a geofence-based matching engine with Redis GEOSEARCH for event-driven notifications, cutting client battery drain by **[35%]** by eliminating continuous GPS polling.
Built a real-time coin economy with Prisma-managed transactions and an escrow system, processing **[1,000+] simulated P2P transactions** with zero data inconsistency; added intentional trip broadcasting via Socket.IO and BullMQ for real-time slot management.
Integrated IITD-domain-restricted Google OAuth and a reputation-scoring algorithm based on completion rate and ratings, reaching a **[90%]** task-completion rate in pilot testing.
TubeTrend | *Next.js, Rode.js, Pinecone, Groq LLM (Llama 3.3), LangChain* Github Repo..
Built a full-stack AI agent that automates YouTube content research via a multimodal RAG pipeline, indexing **[100+] video transcripts per query** using semantic vector embeddings.
Integrated Groq LLM (Llama 3.3) to auto-generate high-retention scripts and SEO-optimized descriptions from viral trend analysis, cutting manual research time by **[60%]**.
Implemented context-aware memory for cross-playlist/channel querying with source-cited AI responses, and shipped a responsive dashboard forecasting content performance.

Education

Indian Institute of Technology Delhi May 2026 *B.Tech in Material Science and Engineering New Delhi, India*

Technical Skills

Languages & Frameworks: TypeScript/JavaScript, Python, Next.js, React, Redux, Rode.js, Express, Django, Tailwind CSS
Databases & Backend: PostgreSQL, MySQL, MongoDB, Redis, Pinecone (Vector DB), Prisma, Socket.IO, BullMQ, Firebase, Docker, AWS EC2

AI/ML Tools: LangChain, RAG, Groq LLM, HuggingFace Embeddings, Google ADK, Prompt Engineering, MCP **CS Fundamentals**: Strong problem-solving foundation in Data Structures & Algorithms (arrays, trees, graphs, DP), System Design, OOP, JWT Authentication, OAuth 2.0, Git/GitHub
